

## Environmental Protection Agency

## § 141.531

### FINISHED WATER RESERVOIRS

#### **§ 141.510 Is my system subject to the new finished water reservoir requirements?**

All subpart H systems which serve fewer than 10,000 are subject to this requirement.

#### **§ 141.511 What is required of new finished water reservoirs?**

If your system begins construction of a finished water reservoir on or after March 15, 2002 the reservoir must be covered. Finished water reservoirs for which your system began construction prior to March 15, 2002 are not subject to this requirement.

### ADDITIONAL WATERSHED CONTROL REQUIREMENTS FOR UNFILTERED SYSTEMS

#### **§ 141.520 Is my system subject to the updated watershed control requirements?**

If you are a subpart H system serving fewer than 10,000 persons which does not provide filtration, you must continue to comply with all of the filtration avoidance criteria in § 141.71, as well as the additional watershed control requirements in § 141.521.

#### **§ 141.521 What updated watershed control requirements must my unfiltered system implement to continue to avoid filtration?**

Your system must take any additional steps necessary to minimize the potential for contamination by *Cryptosporidium* oocysts in the source water. Your system's watershed control program must, for *Cryptosporidium*:

(a) Identify watershed characteristics and activities which may have an adverse effect on source water quality; and

(b) Monitor the occurrence of activities which may have an adverse effect on source water quality.

#### **§ 141.522 How does the State determine whether my system's watershed control requirements are adequate?**

During an onsite inspection conducted under the provisions of § 141.71(b)(3), the State must determine whether your watershed control pro-

gram is adequate to limit potential contamination by *Cryptosporidium* oocysts. The adequacy of the program must be based on the comprehensiveness of the watershed review; the effectiveness of your program to monitor and control detrimental activities occurring in the watershed; and the extent to which your system has maximized land ownership and/or controlled land use within the watershed.

### DISINFECTION PROFILE

#### **§ 141.530 What is a disinfection profile and who must develop one?**

A disinfection profile is a graphical representation of your system's level of *Giardia lamblia* or virus inactivation measured during the course of a year. If you are a subpart H community or non-transient non-community water systems which serves fewer than 10,000 persons, your system must develop a disinfection profile unless your State determines that your system's profile is unnecessary. Your State may approve the use of a more representative data set for disinfection profiling than the data set required under §§ 141.532–141.536.

EFFECTIVE DATE NOTE: At 69 FR 38856, June 29, 2004, § 141.530 was amended in the second sentence, by revising "water systems" to read "water system", effective July 29, 2004.

#### **§ 141.531 What criteria must a State use to determine that a profile is unnecessary?**

States may only determine that a system's profile is unnecessary if a system's TTHM and HAA5 levels are below 0.064 mg/L and 0.048 mg/L, respectively. To determine these levels, TTHM and HAA5 samples must be collected after January 1, 1998, during the month with the warmest water temperature, and at the point of maximum residence time in your distribution system.

EFFECTIVE DATE NOTE: At 69 FR 38856, June 29, 2004, § 141.531 was amended by adding a sentence to the end of the section, effective July 29, 2004. For the convenience of the user, the added text is set forth as follows:

#### **§ 141.531 What criteria must a State use to determine that a profile is unnecessary?**

\* \* \* Your State may approve a more representative TTHM and HAA5 data set to determine these levels.
